Resorcinol _____yes _____no

Retin-A _____yes _____no

Glycolic Acid _____yes _____no

Alpha-hydroxy Acid _____yes _____no

Scrub or Peel of any kind _____yes _____no

Any other medication? _____

Waxing may cause: Bruises, scabs, scarring, redness, hyper-pigmentation or pimples.

Waxing of soft tissue may cause the skin to tear resulting in the need for stitches. (Most common occurrence is in Brazilian Bikini waxes, male or female.)

New use of the products discussed increases the possibility of a reaction, so if started the esthetician must be informed before the next wax appointment starts.

I understand all of the above-mentioned reactions.

Esthetician Signature / Date _____

Client Signature / Date _____

Some physicians do not recommend waxing for persons suffering from diabetes or who have varicose veins or poor circulation as they are more susceptible to infection. Waxing is never done on clients taking Accutane and is not recommended for clients taking Retin A, Renova, Differin or other types of skin thinning acne medications. Please read the label carefully and consult your dermatologist if you are taking any medication or using any topical cream that contains these medications.
